

Naming Conventions - How to name your classes, variables etc

There exist guidelines on how to name your stuff.

Some teachers might think that you should learn this at the start to form good habits.

But I don't think learning naming conventions is important when you first start out, especially when no one else is working on/using your code.

Let's obsess over the stuff that gives us 80% of the results instead of the unimportant stuff.

You can fix the vanity aspects once you learnt the stuff related to trading.
